

**Abstract**

A flue connection system for an appliance provides a flue connection member. The flue connection member defines an aperture and includes an extending member. The 5 flue connection member is configured to be coupled to a flue duct and an appliance, including a fireplace. An appliance connection member may also be provided for attachment to the appliance. The flue connection member and the appliance connection member are configured to be coupled to one another with the flue connection member positioned in contact with the appliance connection member.
